## EXTENSION/OUTREACH PROGRAMS

### a. Leadership with the Egg Industry Center

The Egg Industry Center (EIC, <http://www.eggindustrycenter.org>) was established in 2008, located at Iowa State University. The mission of EIC is *to add value to the egg industry by facilitating research and learning for egg producers, processors and consumers through national and international collaboration*. Dr. Xin has been serving as director of EIC since its inception. EIC is also staffed with a Program Manager-Business Manager, a Communications Specialist and a part-time Office Assistant. A 14-member Advisory Board that consists of egg producers, allied industry representatives, government officials, and academic scientists/administrators provides consultation and guidance about development of the EIC program priorities. EIC had set a goal to raise \$10 million of private funding to establish an endowment to support its programs. To date, over \$6 million has been raised. EIC is serving the egg industry, academia, government and the general public by:

- Conducting issue-oriented research projects (e.g. hen housing systems, carbon footprint analysis of egg production and processing) and timely dissemination of the research finding;
- Being a research-based clearinghouse for the industry, academia and the general public regarding egg production, procession and consumption;
- Providing up-to-date industry statistics and economic analysis/forecasting. Today, the EIC's monthly reports of egg industry statistics and economic analyses are reaching over 1,100 recipients worldwide.
- Providing Weekly Media Updates on topics germane to egg production, processing and utilization.
- Holding annual egg industry issues forums at various geographical locations in the country (Des Moines, IA; Chicago, IL; Columbus, OH; Denver, CO; St Louis, MO; India polis, IN) to address current and emerging issues that affect the egg industry and the consumers.
- Funding research/extension/educational efforts to address current and emerging issues. To date EIC has either jointly or solely funded a number of multi-state, multi-disciplinary projects concerning impact of alternative hen housing systems, environmental footprint assessment of egg production, and egg safety associated with various housing types.
- Developing/facilitating national and international partnerships and collaborations to address issues that are commonly facing the egg industry, e.g., American Egg Board (AEB), United Egg Producers (UEP), and International Egg Commission (IEC).

The EIC extension/educational deliverables are distributed to more than 1,100 national and international recipients covering egg producers (>90% U.S. egg producers) and companies, allied industries (breeder, equipment), government agencies, and researchers and extension personnel in academia. Although EIC is physically located at ISU, its programs and activities are national and international in nature.

### b. Leading ABE Extension Program to Serve the Poultry Industry

Dr. Xin leads the ABE departmental extension program in serving the state, regional and national poultry industry. In addition to producing the extension publications listed previously, Dr. Xin conducts the following extension/outreach programs:

- Providing leadership at the national level in addressing environmental (air quality) issues facing the egg industry. For instance, Dr. Xin has been serving as the chair of the United Egg Producers Environmental Scientific Panel (ESP) since 2004 (UEP represents over 90% of the U.S. egg producers). The missions of ESP are a) to serve as the clearinghouse for the egg industry regarding environmental issues related to egg production and state of science on environmental research; and b) to explore practical means and make recommendations on best management practices to improve indoor air quality and mitigate air emissions of egg production facilities. The 14-member ESP consists of leading university researchers (Iowa State University, Pennsylvania State University, Purdue University, and University of Illinois), allied industry representatives, producer representatives, and government agency (USDA). As a result of the ESP's collective effort, a USDA-CIG demonstration project recently completed (2010) in Iowa and Pennsylvania

demonstrate that use of dietary manipulation is a viable means to mitigate ammonia (major noxious gas in poultry houses) emissions and improve manure nutrient contents for laying-hen houses. The mitigation technology is expected to be adopted by increasing number of egg producers.

- Conducting educational programs on issues of animal (particularly poultry) production air quality, environmental control and production sustainability via invited and participatory presentations at local, regional, national and international extension workshops and symposia.
- Providing technical consultation to animal (poultry in particular) producers and allied industries regarding engineering and management issues related to animal production.
- Serving on board of directors or advisory councils for commodity groups (e.g., Iowa Egg Council, Iowa Poultry Association, Iowa Turkey Federation, United Egg Producers, American Egg Board, National Pork Producers Council) and governmental agencies (USDA)
- Integrating emerging animal industry issues into applied research/demonstration projects, which have led to timely, research-based solution or information, therefore significant impacts on the livestock and poultry industries at state and national levels. Examples of such integrated projects include:
  - Quantification and mitigation of air emissions from poultry production operations
  - Improving the quality and efficiency of shipping poultry and swine breeder stocks worldwide
  - Devising cost-effective methods for combating summer heat stress in commercial laying hen houses
  - Establishing research-based data on manure nutrient production from laying hen facilities, which have been adopted in the state (IDNR) guidelines for developing manure management plans.
  - Improving energy efficiency of creep heating and microenvironment in the swine farrowing operation
  - Helping an Iowa-based swine equipment manufacturing company to improve design and quality of heat mat for creep heating
  - Assisting equipment manufacturers in developing heat mat and controllers for swine creep heating
  - Field demonstration of dietary manipulation to reduce ammonia emissions while maintaining or enhancing production efficiency for laying-hen operations
- Developing and maintaining strong partnerships/network with state and national commodity groups, inter-state institutional and governmental agencies to enhance outreach programs
- Supporting agricultural engineering field specialists, as needed, in carrying out their extension programs. The support is in the form of annual in-serve training, collaboration on field demonstration projects, and answering technical questions.
- Producing/contributing to over 60 extension publications, media reports and popular press articles

**INTERNATIONAL PROGRAMS/ACTIVITIES AND ACCOMPLISHMENTS****Academic Collaborations and Capacity Building with International Institutions**

- Since 1996 Dr. Xin has been conducting academic collaborations and capacity building with the Chinese Academy of Agricultural Sciences (CAAS) and China Agricultural University (CAU) in the area of animal production environment and animal welfare. The collaboration has been in the forms of conducting educational workshops at CAAS and CAU, reciprocal visits/exchange of faculty, joint training of CAAS and CAU graduate students – especially PhD students (both in Beijing and at ISU), joint research projects funded by USDA-Foreign Agricultural Service, China Ministry of Agriculture and China Ministry of Science and Technology, and publications in international journals. A special accomplishment of the collaboration with CAAS is establishment of a China-US Agro-environmental Center of Excellence (CUACE) based at CAAS in Beijing since 2002. Sponsored by the USDA-FAS, Dr. Xin played a key role in the establishment of CUACE. The Center, the first of its kind in China, has been serving as the clearinghouse and think-tank for developing national policies and plans on environmental issues and sustainable animal production systems in China. Working closely with Dr. Hongmin Dong, professor, Director of the Center and Deputy Director of the Institute, Dr. Xin has been instrumental to the development and implementation of the Center's mission and goals. A recent example of the collaborative research endeavors is the project on "Evaluation of Greenhouse Gas Emissions Reduction through Use of Biogas Digesters for Swine Manure" jointly funded by the U.S. EPA (Global Methane-to-Market Program) and China Ministry of Agriculture. Since 1996 Dr. Xin has been an Honorary Professor of CAAS and CAU. In 2008 he was appointed an Adjunct Professor of CAU to further his collaboration and capacity building with CAU. For instance, he is now serving on the Scientific Advisory Committee of the CAU Key Laboratory on Agricultural Structures and Environment. Each year Dr. Xin spends a total of 2-4 weeks at CAAS and CAU, conducting academic exchange and technical advice. To date, Dr. Xin has participated in/contributed to advising of more than 30 graduate students at CAAS and CAU.
- Since 1998 Dr. Xin has been conducting academic collaboration and capacity building with two Brazilian universities, Federal University of Vicosa (UFV) and the Federal University of Lavras (UFL) in the areas of animal production environment and animal welfare. Once again, the collaboration takes the forms of educational workshops at UFV and UFL, reciprocal visits/exchange of faculty, joint training of Brazilian undergraduate and graduate students (both in Brazil and at ISU), joint research and educational projects funded by US and Brazilian agencies, and publications in international journals. Specifically, since 2002 Dr. Xin has been serving as co-advisor or committee member for more than 10 graduate students at UFV through the so-called Sandwich Program. Two Memorandums of Agreement (MOAs) between UFV and ISU and between UFL and ISU have been in operation to facilitate the academic exchange, and Dr. Xin serves as the coordinator of the MOAs. During the period of 2004-2008, through a competitive grant funded by the US Department of Education (FIPSE) and the Brazilian CAPES Foundation, a US-Brazil Educational Consortium was established to train U.S. and Brazilian undergraduate students in agricultural and biosystems engineering, and Dr. Xin serves as the ISU project director (in collaboration with University of Kentucky). Through the consortium project, 14 ISU undergraduate students studied at UFV and 14 Brazilian students studied at ISU for one semester. During the project period, Dr. Xin engaged the exchange Brazilian undergraduate students in research projects. The feedbacks from both ISU and Brazilian students were extremely positive. A new FIPSE-CAPES project has been awarded (2009), allowing the successful academic exchange/collaborations to continue. Dr. Brian Steward serves as the ISU coordinator of the new project.
- In 2011 Dr. Xin, together with Dr. Max Rothschild (Distinguished Professor of Animal Science), co-led the ISU Ensminger Exchange Program Team (6 members) to China, where the team conducted academic changes in Beijing (Chinese Academy of Agricultural Sciences – Institute of Animal Science) and Huazhong Agricultural University in Wuhan. The exchange program enhanced the existing academic collaborations and planted seed for future, long-term academic cooperation/collaboration, particularly among the young scientists from both sides.

- In October 2011, at the invitation of the Chongqing Academy of Animal Sciences (China), Dr. Xin and colleagues played a key role in establishing the International Research Center for Animal Environment and Welfare headquartered in Rongchang, Chongqing. The purposes of the Center are: First, utilize research capabilities and resources of Chinese and international scientists and institutions, synthesize successful experience and proven management practices, and apply new technologies from various countries to advance the knowledge and technologies to enhance animal environment and welfare worldwide. Second, provide a platform for global networking and exchange to advance animal environment research, improve animal health and welfare, production efficiency and product quality, and ultimately improve the quality of life for the mankind. Current participating institutions include: Iowa State University, University of Manitoba (Canada), University of Illinois at Urbana-Champaign; Purdue University, University of Missouri, University of Southern Queensland (Australia, through the National Centre for Engineering in Agriculture); Wageningen University and Research Center (The Netherlands), Aarhus University (Denmark); University of Tennessee, Catholic University of Leuven (Belgium), University of Campinas (Brazil), The Ohio State University, China Agricultural University; Northeastern Agricultural University; Nanjing Agricultural University, and Chongqing Academy of Animal Sciences. More institutions or organizations are expected to join in the Center membership subject to approval by the Board of Directors (BOD). Dr. Xin was appointed as the Overseas Co-chair of the inaugural BOD, along with Dr. Baoming Li of CAU as the Chinese Co-chair for a 4-year term. Since 2011, every odd year, an International Symposium on Animal Environment and Welfare has been held in October (2011, 2013, and 2015), and every even year a smaller-scale workshop has been held (2012, 2014). Working with local hosts, Dr. Xin has been responsible for organizing and coordinating the symposia and workshops. He served as the co-chair of the 2011 and 2013 Symposia, and is doing the same for the 2015 symposium (Oct. 23-26, 2015).

#### **Research Collaborations with Prominent International Institutions**

- During the period of 2006-2010 Dr. Xin was the U.S. member of an international research team (14 institutions), funded by the French Environment and Energy Agency (Dr. Paul Robin, France, Project Director), to develop international reference methods for measuring air emissions from livestock and poultry production systems. The reference methods have been disseminated to researchers and professionals worldwide for determining air emissions from animal production systems, so that the results are more comparable from country to country.
- Since 2000 Dr. Xin has collaborated with Professor Christopher Wathes of the United Kingdom, first at Silsoe Research Institute (prior to 2006) and later at the Royal Veterinary College of University of London (2006-2013), in the areas of physiological and behavioral responses of animals to multiple thermal and gaseous stressors. One of Dr. Xin's PhD students (Angela Green who is now on faculty at University of Illinois Urbana-Champaign) spent six months (Jan-June 2005) at SRI conducting animal welfare research. Reciprocal visits by Drs. Wathes and Xin were made and joint technical publications produced.
- Since the late 90's Dr. Xin has been collaborating with Professor Daniel Berckmans at the Catholic University of Leuven (KUL), Belgium in quantification and modeling of physiological, energetic and behavioral responses of animals to biophysical factors, and recently on precision livestock farming (PLF). Students and faculty exchanges between ISU and KUL have taken place; and special symposia have been held.
- Dr. Xin has conducted collaborative research with the National Institute of Animal Industry of Japan (Dr. Atsuo Ikeguchi) in indoor air quality and welfare of poultry and swine as affected by biophysical factors. Reciprocal visits by Drs. Ikeguchi (6 months) and Xin (1 month) were conducted and journal articles have been published. At the recommendation of Dr. Ikeguchi and Dr. Tanaka (Dr. Xin's former post-doc and now Chief Researcher at NARO, Japan), Dr. Yoshiyuki Abe, Senior Researcher at National Agriculture and Food Research Organization (NARO, Japan) – Institute of Livestock and Grassland Science is conducting research in Dr. Xin's lab (Nov 2013 – Nov 2014).
